Interview questions

Questions are the same but the style of asking can be different so hear the question properly.

Try to avoid giving an answer in short. Try to explain the answer.

1. Introduce yourself or tell me about yourself or Tell me about you and your family.
2. Why you choose Australia for your further studies / Why did you choose Australia for your studies.
3. Why you did not choose India, Why Not India, Why you did not study this course in your home country?
4. Why do you want to study this course? Why did you choose this course?
5. Comparison with other countries like usa, Canada, uk, nz.
6. Why did you choose this university? Why you choose ____ university name? Why you choose this university?
7. Tell me about your Course. What do you know about the Course.
8. Course subjects and subjects credit points (majors you have opted for)
9. Accreditation of the course available or not
10. What are your future plans? What will you do after completing this course? What will you do after this course?
11. Job positions, salary package, company name.
12. How much will you earn after completing this course.
13. Who is sponsoring you? What is the annual income of your family/ parents?
14. Are you planning to take education loan?
15. How much funds are available in savings and fixed deposits?
16. Who are the other relative sponsors?
17. Tell me your routine. What do you do all day?
18. Please tell me your passport number?
19. What is the expiry date of your passport?
20. What is the start date of your passport?
21. What is the living expense of Australia?
22. What is the distance between Bundoora to Melbourne (this is for the university who is far from the city)

23. Explain in detailed about your job you are doing in India?
24. Who is your counsellor/ or agent name.
25. What are the limitation to work in Australia on student visa
26. What is the university fees
27. Which all other universities you have research in Australia?
28. Which campus you have applied for?
29. What are your hobbies.

1. Introduce yourself or tell me about yourself and your family.

My name is Bhavin Patel, hailed from Surat, Gujarat. I am 23 years old. I recently completed my bachelor of technology in Information technology from Uka Tarsadia University in July -2024 with a 6.55 CGPA. I live in a nuclear family of five members including me, my parents, my grandmother and my younger brother.

15. What is your passport number, start date, and expiry date?

My passport number is U89065518 and starting date is 22/03/2021 and expiry date is 22/03/2031.

2. Why did you choose Australia for your further studies?

I chose Australia because it offers a high-quality education system that focuses not only on theory but also on practical skills. This is very important for my field, Information Technology, where real-world knowledge and hands-on experience are essential.

Australian universities are globally recognized and provide modern curriculum aligned with industry needs. I also found that the teaching approach encourages critical thinking, problem-solving, and independent learning, which will help me grow both academically and professionally.

Another important reason is Australia's multicultural environment. Students from many countries study there, so it gives me an opportunity to interact with diverse people, improve my communication skills, and gain global exposure.

Additionally, Australia is known for its safe environment, high standard of living, and strong student support services. Overall, I believe studying in Australia will provide me with the right education, international exposure, and career opportunities to build a successful future.

3. Why did you not choose India for this course?

India has many excellent universities that offer Master's programs in Information Technology. However, most universities require higher scores and extensive experience, which I currently lack. Additionally, while IT programs are widely available, specific courses like Cloud security& cybersecurity are offered by only a limited number of universities. Admission to these universities often requires qualifying entrance exams such as GATE or university-specific tests, adding another layer of difficulty. Preparing for multiple entrance

exams for different universities is also very time-consuming and can delay academic progress.

Furthermore, due to India's large population and reservation system, the number of available seats becomes highly limited, making admission even more competitive. Moreover, Indian universities primarily focus on theoretical learning rather than industry-oriented training and specialization in a particular field. The global ranking of Indian universities in IT-related programs is relatively low compared to top institutions worldwide. Studying in India would also provide limited international exposure, as there are fewer opportunities to interact and collaborate with students from diverse global backgrounds.

Considering these factors, I decided to explore options abroad. After researching various countries and institutions, I chose Australia for my Master's, as it offers top-ranked universities with a strong emphasis on practical knowledge, industry-driven learning, hands-on experience, and a multicultural learning environment

5. Comparison with other countries (USA, Canada, UK, NZ)

• USA – The USA has top universities, but tuition fees are very high, and the visa process is complex.

• Canada – Canada offering me diploma graduate in data science, master's requirement is high.

• UK – The UK has a strong education system, but short duration course than Australia.

• New Zealand – Fewer universities offer advanced data science programs compared to Australia.

Australia provides the perfect balance of quality education, job opportunities, and post-study work benefits, making it the best choice.

9. Accreditation of the course

The program is accredited by Australian Computer Society, ensuring global recognition and industry relevance.

10. Who is sponsoring you? What is your family's annual income?

My parents are sponsoring my education, and our annual income is around INR 15 LPA.

11. Are you planning to take an education loan?

Yes, I am taking a partially funded education loan to support my tuition fees and living expenses.

12. How much funds are available in savings and fixed deposits?

We have around INR [Mention Your Savings in savings and fixed deposits, which will support my education and stay in Australia.

13. Who are your other relative sponsors?

I don't have any other relative sponsors. My parents and my grandmother are funding my education.

14. Tell me about your daily routine.

I wake up early in the morning, complete my daily chores, and visit the temple for Mangala Aarti. After that, I get ready and have breakfast with my family before heading to Workspace Co. to work on my freelancing project. Once I achieve my daily goals, I return home, have dinner, and spend quality time with my family and loved ones. In the evening, I go out to play volleyball with my friends. Around 11 PM, I come back home, freshen up, and then head to bed.

15. What is your passport number, start date, and expiry date?

My passport number is U89065518 and starting date is 22/03/2021 and expiry date is 22/03/2031.

16. What is the living expense in Australia?

The average living expense in Australia is around AUD 29,710 per year.

18. Explain your job experience in India.

I worked as a Freelance Data Science Consultant, specializing in machine learning models, NLP applications, and data visualization.

20. What are the work limitations on a student visa in Australia?

- Students can work 48 hours per fortnight during the academic term.
- Full-time work is allowed during semester breaks.

21. What is your university fee?

My university fee is around AUD 43,000 per year.

23. Which campus have you applied for?

I have applied for the [Mention Campus Name] campus.

24. What are your hobbies?

I enjoy problem-solving, project-making, watching financial videos, cooking, and serving the poor. I also love listening to music and playing volleyball.

Interview Answer (Well-Structured & Professional)

1️⃣ **Total Credit Points**

"My Master of Applied Information Technology program has a total of **192 credit points**."

2️⃣ **Credit Point Distribution**

"Out of these, **120 credit points are core subjects**, which focus on foundational and advanced IT skills.
The remaining **72 credit points** are flexible and can be completed through **Option 1 or Option 2**."

3️⃣ **Chosen Study Option**

"I chose **Option 1**, which is more industry-focused and practical."

Then explain calmly:

"Option 1 consists of:

- **2 research/project units**, and
- **4 elective subjects**
  Each project or elective carries **12 credit points**, which together complete the required **72 credit points**."

(You sound organised and intentional here 👌)

4️⃣ Elective Subjects (Very Important Part)

Now confidently list and link them to industry demand:

"My elective subjects are carefully selected based on current industry needs:

- **Cloud Security**, which focuses on securing platforms like AWS and Azure
- **Security and Risk Management**, where I learn to identify threats, manage risks, and design security policies
- **Mobile Applications**, which covers designing and developing applications for smartphones
- **Project Planning and Control**, which builds skills in scheduling, budgeting, and managing IT projects"

Then add value:

"These electives help me combine **technical expertise with security awareness and project leadership skills**."

Core Subjects (Detailed but Smart Explanation)

"The core subjects provide a strong foundation in advanced and emerging technologies. They include:

- **AI Assisted Project Management** – where I learn how Artificial Intelligence enhances project planning, automation, and decision-making, helping organizations complete projects faster with reduced risk.
- **Fundamentals of Cyber Security** – which builds my understanding of protecting systems, networks, and data from cyber attacks through encryption, threat detection, and security best practices.
- **Networking Systems** – focuses on how computers communicate through LAN, WAN, and cloud infrastructure, which is essential for building secure and scalable IT environments.

- **Database Analysis and Design** – teaches me to design efficient databases using data modeling, normalization, and performance optimization to manage large volumes of data effectively.
- **Advanced Object-Oriented Programming** – helps me develop scalable software using principles like inheritance and polymorphism, improving code reusability and structure.
- **Applied Natural Language Processing** – where I learn how machines understand human language using AI techniques, commonly applied in chatbots, voice assistants, and translation systems.
- **Neural Networks and Deep Learning** – covers advanced AI models that mimic the human brain to recognize patterns, used in technologies such as image recognition and predictive analytics.
- **Introduction to Research** – develops my skills in academic research, data analysis, and technical report writing, preparing me for innovation and complex problem-solving.
- **Advanced Project** – a practical capstone unit where I apply my knowledge to solve a real-world problem, demonstrating both my technical and project management skills.
- **Data Warehousing and Mining** – focuses on analyzing large datasets to uncover meaningful patterns and insights that support business intelligence and strategic decision-making."

6️⃣ Strong Closing Line (Very Interview-Winning)

"Overall, this course structure equips me with both **strong technical knowledge and practical experience**, preparing me to become job-ready for roles in **cloud security, risk management, advanced software development, and IT project coordination**."

My Master of Applied Information Technology program has a total of **192 credit points**.

Out of these, **120 credit points are core subjects**, which build strong foundational and advanced IT knowledge. The remaining **72 credit points are flexible**, and I chose **Option 1** because it is more practical and industry-focused.

Option 1 includes **two project units and four elective subjects**, with each unit carrying 12 credit points. This structure allows me to gain both academic knowledge and hands-on experience.

I selected my electives based on current industry demand.

- **Cloud Security** helps me understand how to secure platforms like AWS and Azure.
- **Security and Risk Management** teaches me how to identify threats and design security policies.
- **Mobile Applications** focuses on developing user-friendly smartphone applications.
- **Project Planning and Control** builds skills in scheduling, budgeting, and managing IT projects.

Together, these electives help me combine technical expertise with security awareness and project management skills."

My core subjects cover emerging technologies such as Artificial Intelligence, cybersecurity, networking, database design, and advanced programming. I will also study Natural Language Processing and Deep Learning, which are widely used in modern intelligent systems.

Additionally, the research unit and advanced project will allow me to apply my knowledge to solve real-world problems, strengthening both my technical and analytical abilities.

Overall, this course provides a balanced mix of theoretical knowledge and practical experience, preparing me to become job-ready for roles in areas such as cloud security, software development, and IT project management.

Why choose Victoria university?

I chose Victoria University because it is globally recognized for quality education and career-focused learning. It is ranked in the **top 2% of universities worldwide** by the Times Higher Education rankings and placed in the **401–500 global range**, demonstrating strong academic standards. The university is also ranked **70th among the world's top young universities**, highlighting its rapid growth and excellence.

Victoria University is highly regarded for student success — it is **#1 in Victoria for skills development and peer engagement**, and employers rank its graduates **#1 in Australia for technical and foundation skills**. My program, the **Master of Applied Information Technology**, is **ACS-accredited**, ensuring it meets industry standards and prepares me with practical, job-ready IT skills.

Additionally, VU is ranked **201–300 in the THE Impact Rankings** for its contribution to sustainability, and with **nine modern campuses**, strong facilities, and industry connections, it offers excellent exposure and career opportunities. Overall, it provides the ideal combination of global recognition, practical learning, and strong employability.

What are your future plans?

My future plan is clearly structured into short-term and long-term goals.

In the short term, after completing my Master of Applied Information Technology, I plan to begin my career in roles such as Cloud Security Analyst, Cybersecurity Specialist, or IT Project Coordinator. As a fresher in India, these roles typically offer an annual salary package ranging between ₹8 to ₹12 lakhs, depending on skills and certifications. I would like to work with reputed multinational companies in India such as Tata Consultancy Services, Infosys, HCL,Oracle,wipro or IBM.

(where I can apply my knowledge of cloud platforms, cybersecurity, AI technologies, and software development while gaining valuable industry experience.)

In the long term, after gaining strong technical expertise and professional growth, I aim to progress into senior roles such as a Cloud Security Architect or IT Security Manager. Professionals in these positions commonly earn between ₹20 to ₹35 lakhs per annum in India, reflecting the high demand for advanced cybersecurity expertise. In these roles, I want to design secure digital infrastructures and help organizations protect critical data from evolving cyber threats.

Overall, this course will equip me with globally relevant skills and practical exposure, enabling me to build a successful career, achieve financial growth, and contribute effectively to the rapidly growing IT industry in India.

why choose only Victoria rather than other university?

I explored several universities before selecting Victoria University for my Master of Applied Information Technology. My comparison was mainly based on course structure, global recognition, campus environment, and learning facilities.

CQUniversity Australia has strong global standing, being ranked around the top 500 in QS and also appearing in THE rankings. It has multiple campuses across Australia with modern labs, libraries, and good student support, which makes it attractive for international students seeking flexibility.

The **University of the Sunshine Coast** is a growing public university known for its supportive learning environment and smaller class sizes. Its campus is located in a peaceful coastal region with modern academic facilities, which can help students focus well on their studies.

Kaplan Business School offers campuses in major cities like Melbourne and Sydney. Although it is not part of global rankings such as QS or THE, it is recognised for strong teaching quality, personalised attention, and career-oriented education.

However, **Victoria University stood out the most to me.** It is globally ranked and located in Melbourne, one of the world's best student cities. The university provides modern facilities, strong industry connections, and a practical teaching approach. What I particularly liked is its focus on real-world skills and student support, which aligns perfectly with my goal of becoming job-ready in areas like cloud computing and cybersecurity.

Overall, I believe all these universities provide quality education and valuable opportunities. But after careful comparison, Victoria University matches my academic needs, preferred learning style, and long-term career plans the best."

"I understand that the Student Visa Subclass 500 comes with important responsibilities, and I am fully prepared to follow all the conditions.

First, I must remain enrolled in a full-time course at a CRICOS-registered institution and maintain satisfactory academic progress and attendance.

Second, I am aware of my work rights — I can work up to 48 hours per fortnight during my study period and full-time during scheduled breaks. However, my primary focus will always be my education.

Third, I will maintain Overseas Student Health Cover (OSHC) for the entire duration of my stay to ensure I am financially prepared for any medical needs.

I will also keep my residential address and personal details updated with my university and comply with the Genuine Student requirement, demonstrating that my main intention in Australia is to gain quality education and return with enhanced skills for my career.

Overall, I respect Australia's immigration laws and will strictly follow all visa conditions while contributing positively as a responsible international student."
